DETAILED ACTION

1. In view of amendment filed July 14, 2005, claims 10, 11, 20, and 21 have been cancelled. Claims 1-9, 12-19, 22 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1713

3. Claims 1-3, 7-9, 12-14, 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al. (US 6,767,968 B1) for the reasons adequately set forth from non-final office action of July 14, 2005.

The argument filed is non-persuasive. Although applicants argue that it would not have been obvious for the claimed limitations which recites "said block copolymer can change the surface tension of an olefinic substrate by an amount of at least 10 mN/m". However, applicants must recognize that such claimed feature is not a process-related limitation. Rather, the "change the surface tension of an olefinic substrate by an amount of at least 10 mN/m" is a property that is dependent on the block copolymer that the claimed process produces. Therefore, in view of the substantially identical composition disclosed in Liu et al. and the composition disclosed in the claimed process, the examiner has a reasonable basis to believe that the claimed change of surface tension is inherently possessed in Liu et al.

Regarding applicants' argument that although Liu et al. disclose the claimed composition, however, the examiner believes that the claimed invention is not considered obvious in light of Liu et al. because Liu et al. are silent on the claimed process. However, applicants must recognize that the claims as written contain mostly property limitation that are related to the product of the process, not to the claimed process.

Art Unit: 1713

In view of the reasons set forth, the 103 rejection set forth for claims 1-3, 7-9, 12-14, 17-19 is proper.

Allowable Subject Matter

4. Claims 4-6, 15-16, 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Liu et al. are silent on a method of preparing a block copolymer comprising ethylene, butadiene, or a hydrogenation-processing step.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
